

AI Account Intelligence & Outreach Ops

A human-approved multi-agent workflow that researches target accounts, explains ICP fit, and prepares source-grounded outreach. AI handles the repetitive first pass; a person controls the business decision before CRM sync.

3 agents

Researcher / Analyst / Writer

5 / 5 grounded

Verified Oscar Health findings

82 tests

Offline CI quality gate

15 runs

Verified Power BI snapshot

One Run, End to End Like an AI research desk with a human approval counter.

Business Value

Turns scattered account research into a repeatable workflow. Teams receive faster first-pass research, visible reasoning, reusable ICP rules, and a trackable handoff instead of an isolated AI answer.

Control Model

Public company data only. Every accepted claim keeps a source URL. The harness validates evidence and confidence, logs state changes, and routes uncertainty to a person. The system never auto-sends outreach.

Verified Delivery

CrewAI + Tavily ran on Render with Neon PostgreSQL. Slack recorded approval, HubSpot received the approved Note, Power BI refreshed from protected CSV exports, and CI gated deployment.
